THE REWIND ◀◀

For centuries, maps were sacred artifacts, hand-drawn on parchment, guarded by explorers, and occasionally just made up to keep rivals lost at sea. Then came the 1970s, when the U.S. military built GPS to track submarines and spies. By 2005, Google had stitched together a Frankenstein's Monster of satellite images and old school maps. This week, we'll trust our own two feet and learn to get lost.

NEIGHBORHOOD

KEY

- HOME
- green space
- restaurant
- store
- happy place
- public transit

INSTRUCTIONS

* Place Home somewhere near the center
* Mark your go-to spots with icons from the Key and the place name
* Trace how you navigate between your spots: add the routes you use most
* Add a compass rose & fill in the rest with details from your Travel Journal

Don't worry about accuracy--create a stylized map that captures the vibe of your neighborhood, as *you* see it.
